Chiropractic

Advanced Biostructural Correction Chiropractic looks at posture and spinal misalignments called subluxations.

A subluxation occurs when a joint becomes misaligned and fixated thus losing its ability to go through the correct range of motion. This leads to something called dys-kinesia (poor movement). This physical problem can then 'lead to' neurological dysfunction.

The neurological dysfunction includes the increase in 'bad' nerve flow to the brain and decreases the 'good' nerve flow into the brain.

This can lead to problems throughout the body and systems.

How will my child benefit?

- 80% of babies are born with a KISS (upper neck misalignments)
 - (*ref Guttmann Study*)
- Children fall hundreds of times when learning to walk
- Many baby carriers put too much pressure on your babies hips
- We are told about the 'back to sleep' programme
- A child will carry up to 5kg in their schoolbags
- A child will sit slouched at school for approximately 3-4 full hours

All of these physical traumas will cause dys-kinesia and so may reduce our child's 'good nerve flow to the brain.

A child benefits from having clarity, organisation and nurturing of their nervous system.

It is better to light one candle than curse the darkness.

– BJ Palmer

Increasing your child's expression of life

Common childhood 'problems' include asthma, ear infections, colic, ADHD, autism and many others.

Do we cure or treat these problems...No. Do these problems resolve/improve under Chiropractic?
In many cases... Yes!

By increasing your child's potential to deal with their environment and what society and the world throws at them, you'll be giving them the beautiful gift of

.....*Limitless potential*

- Life is the expression of tone. In that sentence is the basic principle of Chiropractic

- Disease is the abnormal performance of certain functions; the abnormal activity has its cause

-DD Palmer
